Dan-- Background only pls, no attribution. All calls being handled by national office. I understand USGS press release and data expected early this pm.

In response to concerns over the its initial testing of two monitoring wells, the E.P.A. collaborated with USGS, (in coordination with the State and Tribes) to conduct additional water sampling in the area for study. The results are slated to be released this fall (USGS today, EPA soon)and reviewed by an independent panel.

No. USGS is releasing sampling data taken this summer from a Pavillion, wyo. area monitoring well. Haven't seen their release but am told it will be just data. EPA will be releasing data soon, not sure when.

Subject: Question

Hey Rich--

Dan Frosch with the NY Times here.

You guys releasing anything on fracking today?

For some reason this date stuck out in my mind.

When you get a sec...

Thanks,

Dan
